

Inspector Spot

Collaborative Asset Assessment with
Semi-Autonomous Robots

Asset Assessment Autonomous Inspections

Strategic technology for raw data collection

Representing the pinnacle of converging technologies, 'Spot' is a valuable tool in automating asset data collection: a true 'next generation' investment for emerging processes.

Spot can walk up and down stairs, over small obstacles, and around larger ones. The large camera on its back can take very high resolution photos of our assets for a variety of current and future use cases.
